

COLLEGE OF ENGINEERING

Aerospace & Mechanical Engineering

MECHANICAL ENGINEERING GRADUATE STUDIES

Making the machines that move our world

Develop technologies that make the world run more smoothly.

\$5.5 MILLION

in annual research expenditures

RESEARCH FOCUS AREAS

- Dynamics and Control
- Fluid Dynamics
- Solid Mechanics
- Thermosciences

DEGREES

- PhD Mechanical Engineering
- MS Mechanical Engineering (online option)
- ME Robotics and Automation

TOP 30%

mechanical engineering graduate programs (U.S. News & World Report 2022)

“ I’ve worked in Spain, Germany and Mexico, and the tools we have at the University of Arizona are absolutely incredible – the best tools, technology and interaction with professors. ”

- Christian Davila-Peralta, PhD student

FUNDING OPTIONS THROUGHOUT DEGREE LIFECYCLE

APPLICATION DEADLINES

- Fall: January 1
- Spring: June 1

CONTACTS

Jesse Little

Associate Head of Graduate Studies  
jesselittle@arizona.edu

Eniko T. Enikov

Director of Master of Engineering Program  
enikov@arizona.edu

Liza Maria Soto

Coordinator, Graduate Studies Program  
lizamariasoto@arizona.edu

COLLEGE OF ENGINEERING

Aerospace &  
Mechanical Engineering

“ Having these researchers, pillars in their fields, under the same roof gives our department an edge in being able to bridge gaps in knowledge and best prepare our faculty and students to solve problems. ”

- Alex Craig, assistant professor

## Faculty Expertise

**Eric A. Butcher** – ebutcher@arizona.edu

spacecraft GNC • astrodynamics • nonlinear dynamics, vibration and control • stability, control and estimation in periodic, delayed and fractional systems

**Cho Lik Chan** – cholik@arizona.edu

heat transfer • materials processing • boundary elements methods

**Stuart A. Craig** – sacraig@arizona.edu

aerodynamics • stability and laminar turbulent transition of supersonic and hypersonic boundary layers • experimental fluid mechanics • hydrodynamic stability

**Eniko T. Enikov** – enikov@arizona.edu

dynamics of charged particles and macro-ions • control of processes driven by electrostatic forces • neural-network-based self-learning methods for control of human-machine interfaces

**Hermann Fasel** – faselh@arizona.edu

computational fluid dynamics • hydrodynamic stability • laminar turbulent transition • turbulent flows • hypersonic flows • flow control • nonlinear dynamics • aerodynamics • UAVs • flight experiments • autonomous flight

**Barry D. Ganapol** – ganapol@cowboy.ame.arizona.edu

radiation and particle transport theory • applied mathematics • satellite remote sensing

**David Hahn** – dwhahn@arizona.edu

thermal sciences • laser-based diagnostics • renewable energy • combustion • biophotonics • laser-material interactions • plasma-material interactions

**Kyle Hanquist** – hanquist@arizona.edu

hypersonics • nonequilibrium flows • molecular gas dynamics • computational fluid dynamics • low-temperature plasmas • rarefied gas and optimization

**Qing Hao** – qinghao@arizona.edu

heat transport inside lithium-ion batteries • high-power electronics • thermal insulation materials • thermoelectrics • measurement & applications of graphene and other two-dimensional materials

**Kavan Hazeli** – hazeli@arizona.edu

materials design • human-centered design • mechanical behavior of materials • multi-functional materials • failure analysis • fatigue • thermo-mechanical properties • biomaterials design and characterization

**Jeffrey W. Jacobs** – jwjacobs@arizona.edu

experimental fluid dynamics • hydrodynamic instabilities, including Richtmyer Meshkov and Rayleigh-Taylor instabilities • turbulent mixing

**Peiwen 'Perry' Li** – peiwen@arizona.edu

renewable energy • heat mass transfer in gas turbines and HVACR systems • electrolyzers • energy-water nexus • fuel cells • hydrogen storage and generation • energy and power systems

**Jesse Little** – jesselittle@arizona.edu

active flow control • boundary layer separation • plasma actuators • shock boundary layer interaction • unsteady aerodynamics • vortex body interaction • wind tunnel testing and experimentation

**Erdogan Madenci** – madenci@arizona.edu

prediction of deformation and failure modes in metallic and composite materials • characterization of mechanical properties of materials

**Farzad Mashayek** – mashayek@arizona.edu

turbulent reacting flow • plasma flow • electrostatic atomization • solid ion batteries • computational methods • machine learning applications

**Samy Missoum** – smissoum@arizona.edu

design optimization • probabilistic design, reliability and risk assessment • vibrations • advanced finite element modeling

**Bernard Parent** – bparent@arizona.edu

reactive flows • re-entry flows • plasma-assisted combustion • plasma-based fuel reforming • plasma aerodynamics • computational fluid dynamics • scramjets • lightning

**Hossein Rastgoftar** – hrastgoftar@arizona.edu

decision-making under uncertainty • human-robotic interaction • swarm robotics • system autonomy • UAS traffic management • intelligent transportation • formal specification and verification • finite-state abstraction of dynamical systems

**Sergey Shkarayev** – svsv@arizona.edu

aerodynamics • fluid-structure interactions • unmanned aerial vehicles

**Jekan Thanga** – jekan@arizona.edu

space robotics • CubeSats and sensor-networks • machine learning applied to dynamics and control of swarms • small satellite propulsion • autonomous systems • power and thermal systems

**Xiaoyi Wu** – xwu@arizona.edu

tissue engineering • biomechanics • biomaterials and computational biomaterials

**Israel Wygnanski** – wygy@arizona.edu

aerodynamics related to fixed-wing and rotary aircraft • control of separation • high-lift devices • drag reduction • aeroacoustics, particularly jet noise, cavity noise and screech

**Vitaliy Yurkiv** – vyurkiv@arizona.edu

multi-physics modeling and machine learning calculation of energy storage and conversion technologies • ab-initio density functional theory calculations • phase-field modeling • thermal measurements of rechargeable batteries • thermal runaway assessment in electric vehicles

**Olesya Zhupanska** – oiz@arizona.edu

micromechanics of composites • structural composites in extreme environments • low velocity impact of composites • PDE-constrained optimization with applications to mechanics • contact mechanics

**Yitshak Zohar** – zohar@arizona.edu

biomicrofluidics and microscale manipulation of biospecies, such as proteins, cells and tissues in microfluid systems
