Develop technologies that make the world run more smoothly.

$5.5 MILLION in annual research expenditures

Top 30% mechanical engineering graduate programs (U.S. News & World Report 2019)

I’ve worked in Spain, Germany and Mexico, and the tools we have at the University of Arizona are absolutely incredible – the best tools, technology and interaction with professors.

- Christian Davila-Peralta, PhD student

RESEARCH FOCUS AREAS
- Dynamics and Control
- Fluid Dynamics
- Solid Mechanics
- Thermosciences

DEGREES
- PhD Mechanical Engineering
- MS Mechanical Engineering (online option)
- ME Mechatronics

APPLICATION DEADLINES
- Fall: January 1
- Spring: June 1

CONTACTS
Jesse Little
Associate Head of Graduate Studies
jesselittle@email.arizona.edu

Eniko T. Enikov
Director of Master of Engineering Program
enikov@email.arizona.edu

Cho Lik Chan
Director of Online MSME Program
cholik@email.arizona.edu

Jini Kandyil
Program Coordinator Senior, Graduate Studies/Instruction Support
rmko23000@email.arizona.edu

FUNDING OPTIONS THROUGHOUT DEGREE LIFECYCLE

ame.engineering.arizona.edu
Faculty Expertise

Eric A. Butcher – ebutcher@email.arizona.edu
spacecraft GNC • astrodynamics • nonlinear dynamics, vibration and control • stability, control and estimation in periodic, delayed and fractional systems

Cho Lik Chan – chollik@email.arizona.edu
heat transfer • materials processing • boundary elements methods

Stuart A. Craig – sacraig@email.arizona.edu
aerodynamics • stability and laminar turbulent transition of supersonic and hypersonic boundary layers • experimental fluid mechanics • hydrodynamic stability

Eniko T. Enikov – enikov@email.arizona.edu
dynamics of charged particles and macro-ions • control of processes driven by electrostatic forces • neural-network-based self-learning methods for control of human-machine interfaces

Hermann Fasel – faselhn@email.arizona.edu
computational fluid dynamics • hydrodynamic stability • laminar turbulent transition • turbulent flows • hypersonic flows • flow control • nonlinear dynamics • aerodynamics • UAWs • flight experiments • autonomous flight

Barry D. Ganapol – ganapol@cowboy.ame.arizona.edu
radiation and particle transport theory • applied mathematics • satellite remote sensing

David Hahn – dwahn@email.arizona.edu
thermal sciences • laser-based diagnostics • renewable energy • combustion • biophotonics • laser-material interactions • plasma-material interactions

Kyle Hanquist – hanquist@email.arizona.edu
hypersonics • nonequilibrium flows • molecular gas dynamics • computational fluid dynamics • low-temperature plasmas • rarefied gas and optimization

Qing Hao – qinghao@email.arizona.edu
heat transport inside lithium-ion batteries • high-power electronics • thermal insulation materials • thermoelectrics • measurement and applications of graphene and other two-dimensional materials

Jeffrey W. Jacobs – jwjacobs@email.arizona.edu
experimental fluid dynamics • hydrodynamic instabilities, including Richtmyer Meshkov and Rayleigh-Taylor instabilities • turbulent mixing

Peiwen 'Perry' Li – peiwen@email.arizona.edu
renewable energy • heat mass transfer in gas turbines and HVAC systems • electrolyzers • energy-water nexus • fuel cells • hydrogen storage and generation • energy and power systems

Jesse Little – jesselittle@email.arizona.edu
active flow control • boundary layer separation • plasma actuators • shock boundary layer interaction • unsteady aerodynamics • vortex body interaction • wind tunnel testing and experimentation

Erdogan Madenci – madenci@email.arizona.edu
prediction of deformation and failure modes in metallic and composite materials • characterization of mechanical properties of materials

Samy Missoum – smissoum@email.arizona.edu
design optimization • probabilistic design, reliability and risk assessment • vibrations • advanced finite element modeling

Parviz E. Nikravesh – pen@email.arizona.edu
analytical and computational kinematics • multibody dynamics

Bernard Parent – bparent@email.arizona.edu
reactive flows • re-entry flows • plasma-assisted combustion • plasma-based fuel reforming • plasma aerodynamics • computational fluid dynamics • scramjets • lightning

Paul Reverdy – preverdy@email.arizona.edu
human-in-the-loop control systems • statistical learning • nonlinear dynamics and control

Aaron J. Rosengren – ajrosengren@email.arizona.edu
astrodynamics • celestial mechanics and dynamical astronomy • applied and computational mathematics • nonlinear dynamics • chaotic and complex systems

Sergey Shkarayev – svs@email.arizona.edu
aerodynamics • fluid-structure interactions • unmanned aerial vehicles

Jekan Thanga – jekan@email.arizona.edu
space robotics • CubeSats and sensor-networks • machine learning applied to dynamics and control of swarms • small satellite propulsion • autonomous systems • power and thermal systems

Anatoli Tumin – tumin@email.arizona.edu
theoretical and computational studies of stability • laminar-turbulent transition • flow control in high-speed flows, including real gas effects

Xiaoyi Wu – xwu@email.arizona.edu
tissue engineering • biomechanics • biomaterials and computational biomaterials

Israel Wygnanski – wyggy@email.arizona.edu
aerodynamics related to fixed-wing and rotary aircraft • control of separation • high-lift devices • drag reduction • aeroacoustics, particularly jet noise, cavity noise and screech

Olesya Zhupanska – oiz@email.arizona.edu
micromechanics of composites • structural composites in extreme environments • low velocity impact of composites • PDE-constrained optimization with applications to mechanics • contact mechanics

Yitshak Zohar – zohar@email.arizona.edu
biomicrofluidics and microscale manipulation of biospecies, such as proteins, cells and tissues in microfluid systems

“Having these researchers, pillars in their fields, under the same roof gives our department an edge in being able to bridge gaps in knowledge and best prepare our faculty and students to solve problems.”

- Alex Craig, assistant professor
